

## Announcement

### **INGENIERIA DE DISEÑO Y UTILLAJES SL. just finished “Advanced stamping solutions development for cold forming Advanced High Strength Steels (AHSS 3<sup>rd</sup> Generation)” project, co-funded by CDTI (Spanish Technological Industry Development Centre – Spanish Science, Innovation and University Department).**

---

The company INGENIERIA DE DISEÑO Y UTILLAJES SL (Grupo Segura) just finished the project “Advanced stamping solutions development for cold forming Advanced High Strength Steels (AHSS 3<sup>rd</sup> Generation)” acronym AMURE-3GEN, thanks to the economic support of Spanish Technological Industry Development Centre (CDTI) – Spanish Science, Innovation and University Department, co-funded by The European Union (FEDER funds) through the Intelligent Growth Operational Program (2014-2020).

The project began November 2018, when R+D staff, based on their researching desire, proposed themselves the objective of researching and developing cold stamping solutions which allow the hot stamping steels replacement from certain applications by an Advanced High Strength Steels cold forming.

After 24 working months in Burjassot and Almussafes facilities with 654.439,00€ CDTI's support, the challenge has been overcome.
